

OPM - OPERATIONS MANAGEMENT (OPM)

OPM 2103 Operations Management (3-1-3)

Provides a detailed study of organisations' value added activities from procurement of resources and transformation into manufactured goods and service outputs. The course begins with introducing the need and importance of operations as a function in any organization and furthers to highlight how operations is linked to organisation's strategy. The course also introduces students to the strategic operations techniques such as Capacity Planning, Location Planning, Product design and development and general Quality Policies.

Prerequisites: STS 2003
